Executive Summary

Our "CS 25-337 Ramily" project seeks to address the challenge of student integration at Virginia Commonwealth University (VCU), particularly for freshmen and transfer students. Many students face difficulties balancing their academic, professional, and social responsibilities, often feeling overwhelmed by the numerous campus resources, which leaves them disconnected and isolated.

To solve this, we are developing "RAMily," a centralized mobile app that will enhance VCU's existing platforms such as VCU Mobile and RamsConnect. RAMily will streamline access to academic resources, student groups, events, and peer-to-peer mentorship, fostering a deeper sense of belonging and community engagement for new students.

Our key design objectives include:

- Creating a user-friendly interface that integrates existing mobile platforms and introduces new features.
- Offering personalized notifications for events, campus traditions, and peer-to-peer interactions.
- Meeting accessibility standards and ensuring security through VCU eID authentication.

To achieve these goals, we are following agile methodologies and leveraging the latest trends in user experience and interface design. Our deliverables will include working prototypes of the login screen, profile creation, and matching tool. The app will be fully functional on both Android and iOS devices, with testing and feedback from current VCU students guiding development.

By simplifying access to university resources and promoting student engagement, our RAMily app aims to positively impact student retention, mental health, and academic success, ultimately building a more cohesive and supportive community at VCU.

Section A. Problem Statement

Freshmen and transfer students at Virginia Commonwealth University (VCU) face significant challenges when trying to integrate into the university community. Many report feeling overwhelmed as they attempt to balance academic, professional, and social responsibilities during their first year. This issue is compounded by the plethora of resources available on campus, with some students naming up to 22 different mobile apps they had to download in an effort to navigate VCU's resources. Despite the abundance of available tools, students still struggle to find relevant information, resulting in increased feelings of disconnection and a lack of belonging.

This lack of connection directly impacts student retention. A significant number of freshmen who fail to complete their degree at VCU either transfer to another institution (66%) or drop out entirely (31%). The problem is widespread, with many students expressing that VCU feels "just like a school" rather than a community. These challenges are not unique to VCU; similar problems exist across higher education institutions, where incoming students often struggle to establish a sense of belonging.

The project's goal is to address this unmet need for deeper community engagement by creating a centralized, homegrown VCU mobile app, "RAMily." This app would integrate key features from existing VCU mobile platforms (e.g., VCU Mobile and RamsConnect) and introduce new functionalities designed to foster student connection and belonging. By simplifying access to academic resources, student groups, events, and peer-to-peer mentorship, the app aims to improve student engagement, mental health, and academic success, ultimately leading to higher retention rates.

The development of this app involves exploring the latest trends in user experience (UX) and user interface (UI) design, integrating AI for personalized recommendations, and testing the prototype with current students. Additionally, this project builds upon previous efforts by VCU's da Vinci Center, which has explored ways to better prepare students for university life.

The problem is not only technical but also social, as solving it requires creating a platform that resonates with students' real-world experiences. Ultimately, "RAMily" will create a more cohesive, supportive environment at VCU, enabling students to thrive academically and socially throughout their university experience.

Section B. Engineering Design Requirements

This section describes the goals and objectives of the project, as well as all **realistic constraints** to which the design is bound. It is meant to provide a structure that helps to formulate the problem. Design requirements are often derived from client or stakeholder needs. They may consider benchmarking against or improving on currently available solutions, providing novel techniques or design solutions, integration with existing components, systems, or equipment, required codes, and standards, general observations of the problem space, etc. Describe how the requirements provided below were researched and decided upon. Common design requirements often include considerations of the design efficacy, cost, safety, reliability, usability, and risk, among others.

Note: The design requirements should be revisited between major reports to ensure that the design objectives and constraints still accurately reflect the client's needs and project goals and to make sure that the team is on track to meet all goals and objectives.

Note: The codes and standards section is not required for the Project Proposal, but is required for all subsequent reports. This section should be comprehensive and thorough, requiring a significant research effort.

B.1 Project Goals (i.e. Client Needs)

Describe the overall goals of the project from the point of view of the customer or client. Goals should be derived from the specified needs of the project and *do not explicitly describe what the design will do*. They should be short, concise, and achievable. Bulleted lists are a good way to present key points and draw the reader's attention to those points. Note that a few sentences should be included at the beginning of any section using a bulleted list to introduce the content of the section and lead into the upcoming list. Some general examples of project goals are as follows:

- **Facilitate Connections:** Enable seamless communication between incoming students, including both freshmen and transfer students, to foster personalized guidance from the point of admission.
- **Promote Campus Engagement:** Increase student participation in campus activities and traditions to strengthen the sense of belonging within the VCU community.
- **Centralize Resource Access:** Provide a single platform that consolidates access to student clubs, academic services, and other campus resources, reducing the need for multiple apps.
- **Support Community Building:** Encourage peer-to-peer interactions, mentorship, and involvement in social and extracurricular activities to improve student engagement and satisfaction.

B.2 Design Objectives

List the key objectives of the design that you will produce. Objectives describe *what the design will do*, not how it should do it. Objectives should be SMART – Specific, Measurable, Achievable, Realistic, and Time-bound. Each objective will ultimately be linked to a design specification/constraint during the design process. Again, lists are nice if applicable.

- **Facilitate Connections:**
Enable seamless communication between incoming students, including freshmen and transfer students, through an in-app messaging feature. The messaging system will be live and accessible upon admission to ensure timely guidance and support.
- **Promote Campus Engagement:**
Increase student participation in campus activities and traditions by providing interactive challenges with location-based check-ins and photo submissions. The engagement tracking system will launch by the start of the fall semester, with participation monitored through a point-based reward system.
- **Centralize Resource Access:**
Develop a single platform that integrates features from RamsConnect, allowing students to easily register for clubs, academic services, and other resources. Integration with eServices and seamless search functionality will be completed before the next academic semester to simplify access.
- **Support Community Building:**
Encourage peer-to-peer interactions and mentorship by enabling students to sign up for events and publicize their attendance within the app. The event registration and social interaction features will launch within the first month of the app's deployment to foster early engagement.

B.3 Design Specifications and Constraints

- The app must be fully functional on both Android and iOS devices.
- The app must allow users to login via VCU eID authentication.
- The app must have a block/report system to report inappropriate conduct during any interactions, with reports being reviewed and processed by admin teams.
- The app should have an option to enable notifications for any key updates not limited to, but including messages, tradition mission progress, and new matches.
- The app must adhere to accessibility standards which will ensure usability for individuals with disabilities.

B.4 Codes and Standards

- IEEE Standard No. 830-1998 – The application must provide guidelines for documenting the software requirements to ensure consistency and testability.
- ISO Standard No. 27001 – Application must follow guidelines managing sensitive user data to ensure information security, privacy and confidentiality.
- ISO Standard No. 40500:2012 – The application must adhere to accessibility standards, ensuring the user interface is navigable and usable by individuals with disabilities.
- NIST Standard No. 800-63 – The app must have secure digital identity verification, including multi-factor authentication and secure login mechanisms using VCU eID.
- FERPA – The app must comply with FERPA regulations to protect the privacy of student education records and contact information.
- VCU Privacy Policy and Data Protection Standards – The app must adhere to VCU's internal privacy policies for handling personal student data and communication preferences.
- Rehabilitation Act of U.S. Federal Code Section 508 – All digital applications, including mobile apps, must be accessible to individuals with disabilities.

Section C. Scope of Work

The project scope defines the boundaries of the project encompassing the key objectives, timeline, milestones, and deliverables. It clearly defines the responsibility of the team and the process by which the proposed work will be verified and approved. A clear scope helps to facilitate understanding of the project, reduce ambiguities and risk, and manage expectations. In addition to stating the responsibilities of the team, it should also explicitly state those tasks which fall *outside* of the team's responsibilities. *Explicit bounds* on the project timeline, available funds, and promised deliverables should be clearly stated. These boundaries help to avoid *scope creep* or changes to the scope of the project without any control. This section also defines the project approach, the development methodology used in developing the solution, such as waterfall or agile (shall be chosen in concert with the faculty advisor and/or project sponsor). Good communication with the project sponsor and faculty advisor is the most effective way to stay within scope and make sure all objectives and deliverables are met on time and on budget.

C.1 Deliverables

The project deliverables are those things that the project team is responsible for providing to the project sponsor. They are the things that are to be produced or provided as a result of the engineering design process. Some deliverables might include a specific number of alternative designs, required analyses to prove the design meets specifications, detailed machine drawings, functional diagrams or schematics, required computer code, flow charts, user manuals, desktop models, and functioning prototypes. A design “proof of concept” is not specific and should be more clearly defined. Academic deliverables include the team contract, project proposal, preliminary design report, fall poster and presentation, final design report, and Capstone EXPO poster and presentation. Provide a bulleted list of all agreed upon project deliverables.

Fall '24

1. Team Contract
2. Project Proposal
3. Preliminary Design Report
4. Fall Poster and Presentation
5. Spring Poster and Presentation
6. Login screen working prototype
7. Profile Creation working prototype
8. Matching tool working prototype
9. Documentation
10. Installation Manual
11. Test Cases for each module
12. Slide for “Fall Expo”

Spring '25

1. Updated Team Contract
2. Spring Expo Poster
3. EXPO Abstract
4. Updated Profile Creation UI
5. Polished Matching Tool Prototype
6. Traditions Prototype
7. Updated App Color Palette
8. Final Design Report
9. Github with App Code and Instruction Manual
10. Video Walkthrough

C.2 Milestones

Milestones are major project phases or tasks that need to be completed in order to ensure the project deliverables. They may include, among other things, completion of calculations, the development of a computational model, completion of an analysis, set-up of an experiment, completion of data acquisition, purchasing of hardware, assembly of a prototype, completion of testing procedures, development of required code, completion of wiring, post processing, etc.

A good rule of thumb is to break the project down into tasks of no larger than 2-3 weeks in length. These can be individual or group tasks. Breaking down the project into tasks/milestones gives the team and the advisor/sponsor a realistic understanding of what can be done in the allotted time. In an agile development approach, later tasks are expected to be adjusted (or changed) as the team works with the earlier developed tasks.

The amount of time it will take to accomplish each milestone and the approximate date that each milestone will be completed should be considered. Do not underestimate the time that it takes to write and prepare major reports and presentation materials. All deliverables and milestones should be included in the project timeline found in Appendix 1. Provide a summary table of all project milestones including required times and completion dates here.

Note: While the project scope, deliverable, and milestones are not intended to change throughout the project, this section should be revisited between major reports to ensure that it still accurately reflects the expectations and requirements of the project team, client, and faculty advisor. Any changes to the project scope, deliverable, and milestones should be thoroughly discussed and mutually agreed upon by all parties. Any changes to this section should be documented and justified in detail.

Sep 6. Team Contract

Oct 11. Project Proposal

- Login Screen Prototype

Nov 15. Fall Design Poster

- Profile Creation Prototype
- Test Cases
- Slide for “Fall expo”
- Provost Presentation

Dec 9. Preliminary Design Report

- Matching Tool Prototype
- Test Cases
- Add documentation
- Practice final presentation for Expo

Jan 31. Team Contract Update

- Working Matching for testing
- Test Cases
- Survey Results
- Polished Matching Tool
- Working Traditions Prototype
- Updated Profile Creation

March 28. Abstract and Poster file for Expo

- Updated App Color Palette
- Working out Bugs
- Porting App to Mobile Device

April 25. Spring Expo

- Share GitHub Repository
- Record Walkthrough Video

May 9. FINAL REPORT/COMPLETED PROJECT DUE

C.3 Resources

Resources needed for project completion should be listed at the proposal stage. These resources can either be purchased within the Project Budget, or provided by the project sponsor. Some examples are hardware such as HPCs or servers, software such as IDEs, data analysis platforms, or version control systems. Access to cloud computing services may also be necessary to scale certain procedures. Additionally, databases containing operational data for testing, as well as libraries or APIs relevant to predictive analytics and machine learning may be required.

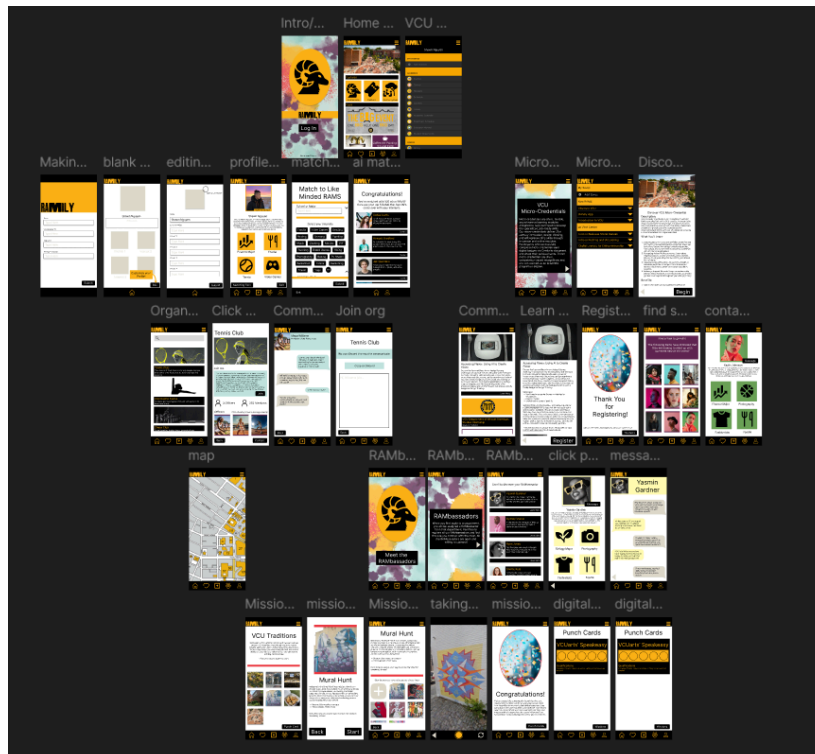

Non-Purchased Items

1. Firebase Database: In order to store user information, the team will use an external database
2. Flutter: This is the language the team will use to build the Ramily app

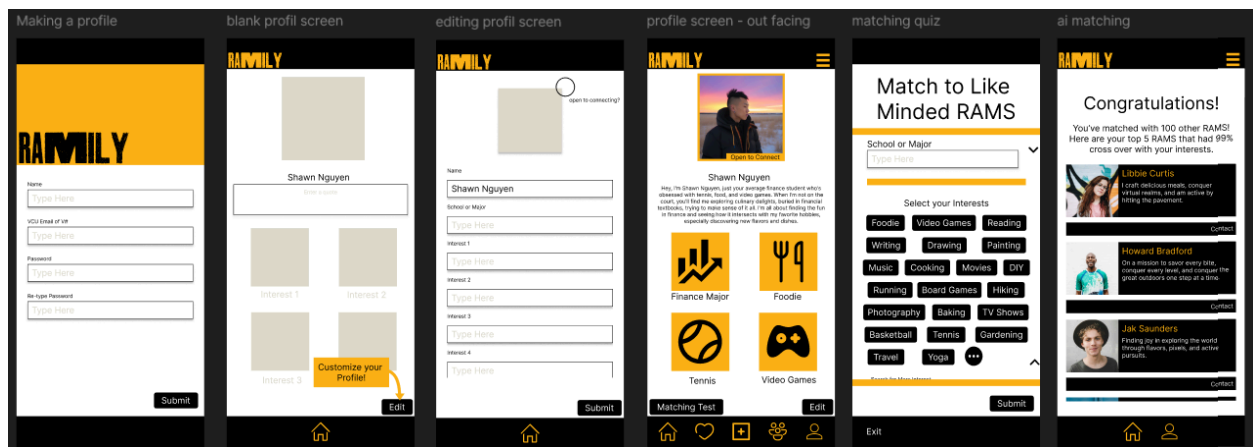

Section D. Concept Generation

Our team was lucky enough to be provided with a full framework for the design in Figma. This limited our creative potential quite a bit as our sponsor already had a team flesh out the design aspect before coming to us with it.

Starting at the top in the diagram below, we have a simple login screen. As the app needs to hold students' information securely, we decided that it would be best to use VCU's Duo two-step authentication instead of a simple Email and Password. As students, we don't have access to Duo, so a placeholder is used currently.

The Profile Creation and Matching tool is where our design differs most from the given framework. First, we've eliminated as many "fill in the blank" style boxes as possible, replacing them with more secure dropdown style inputs. For fields that may have a change in possible selections, choices will be pulled from a config text file, making it easy for a non-programmer to change in the future. We've also consolidated the two interest picking sections into one, styled as the latter. Finally, we decided with the sponsor that it would be best for the user to choose how different aspects of their profile are weighted to be matched, so a compass-themed slider will be implemented to allow the student to find exactly who they're looking for.

Section E. Concept Evaluation and Selection

To systematically evaluate potential design concepts for the Ramily app, we employed a Decision Matrix methodology. This approach allowed us to objectively assess alternatives based on key selection criteria, ensuring alignment with the design objectives and constraints.

Selection Criteria

The following criteria were used to evaluate each design concept:

1. Performance: The ability of the concept to meet technical and functional requirements.
2. Safety: How well the design ensures user safety and minimizes risks.
3. Reliability: The dependability and consistency of the design over time.
4. Feasibility: The practicality of implementing the concept, considering resources and time.

Metrics

Each criterion was associated with specific, measurable metrics:

- Performance: Measured as the percentage of design objectives met.
- Safety: Scored on a scale of 1-5, where 5 indicates minimal risks.
- Reliability: Scored on a scale of 1-5, based on potential for long-term use without failure.
- Feasibility: Scored on a scale of 1-5, with higher scores indicating ease of implementation.

Table 1: Decision Matrix

Criteria	Weight	Design Concept A
Performance	0.4	40
Safety	0.3	4.5
Reliability	0.2	3.5
Feasibility	0.1	3.5
Total Score	1.0	51.5

Section F. Design Methodology

The Ramily project follows an iterative engineering process to evaluate, improve, and evolve the mobile application. The methodology includes computational modeling, experimental testing, and validation to ensure the design meets the established objectives of fostering a sense of belonging and community for incoming VCU students.

F.1 Computational Methods

The design team utilized Figma to create a clickable prototype of the mobile app. The prototype simulated the app's user interface and experience to enable initial evaluation of design concepts.

- The design included features such as peer-to-peer mentorship matching, community-building activities, and resource navigation tailored to VCU students.
- The prototype assumed a seamless integration with existing VCU-managed apps and systems.

F.2 Experimental Methods

To test the prototype and gather user feedback:

- **Testing Equipment and Setup:**
 - The current prototype will be presented on a mobile device/computer during in-person sessions with students in locations not limited to but including the library.
- **Data Acquisition and Instrumentation:**
 - User interactions will be observed as they navigate through the prototype. Questions such as "What are you noticing?" and "What other information would you like to include about yourself?" will be posed to gauge user perspectives and usability. Notes, audio recordings, and post-interactions surveys will be used to capture feedback.
- **Testing Procedures:**
 - Students will be asked to simulate tasks like creating a profile and matching with other students. Testing will emphasize intuitive navigation, feature usefulness, and perceived value of the app.

F.3 Architecture/High-level Design

- The high-level design integrates two core components:
 - User-Centric Navigation: Simplified pathways to locate mentorship programs, resources, and activities.

- Integration with VCU Systems: The app aligns with existing platforms, minimizing redundancy and reducing app fatigue for users.

F.4 Validation Procedure

The validation plan ensures the design meets the needs of VCU students and the sponsor:

1. Prototype Demonstration:

- a. A spring semester presentation will showcase the current prototype and results of initial testing to the VCU Provost's Office. This session will include demonstrations of key features such as profile creation, mentorship pairing, and resource navigation.

2. Client Feedback:

- a. Feedback will be captured through structured interviews, observation notes during prototype usage, and formal surveys. This will ensure a comprehensive understanding of the app's effectiveness and areas for improvement.

3. Iterative Refinements:

- a. Based on feedback, the design will be refined and tested in subsequent phases, with a focus on expanding the feature set and improving usability.

Section G. Results and Design Details

This section highlights the outcomes of the Ramily project, including modeling, experimental, and prototyping results. The final design successfully addresses the challenge of fostering a sense of belonging and community among incoming VCU students through a user-centered mobile application.

G.1 Modeling Results

The team used Figma to design a clickable prototype of the Ramily app. Key results from the modeling phase include:

● User Interface Flow:

- The app's navigation was modeled to streamline access to essential resources, mentorship programs, and community activities.

● User Personas and Scenarios:

- Personas representing VCU freshmen and transfer students informed the design of features, ensuring relevance and usability.

G.2 Prototyping and Testing Results

The prototype will be tested through structured sessions with students navigating specific scenarios:

1. Testing Tools:

- a. Testing will be conducted using an Android and iOS device simulator to ensure cross-platform compatibility. Observations will be documented through session recording and post-test surveys.

G.3 Final Design Details

● Profile Creation

- Key Features:
 - Input
 - Profile Photo
 - Name
 - Email
 - Pronouns
 - Major
 - Interests
 - Prompt & Response
 - Agree to Privacy Policies
 - Navigate to Home Screen

● Home/Profile Screen

- Home Screen:
 - Access to Community Feed & Campus Resources
 - Access to Matching and Traditions Screen
 - Access to Profile Screen
 - Logout functionality
- Profile Screen:
 - Displays:
 - Name
 - Email
 - Profile Photo
 - Major
 - Pronouns
 - Interests
 - Prompt & Response
 - Ability to edit profile responses excluding name & email
 - Logout Option

● Matching Screen

- Features:
 - Displays short guide for first time users
 - Displays all current users starting with top compatibility users
 - Slider to change matching priority from Interest to Major
 - Filter Option

- Ability to view Profiles and Match Details
 - Connect option to begin chat with a user
- **Traditions**
 - Feature:
 - Complete various Campus Traditions Points
 - Earn Points for a prize
 - Descriptions of various Campus Traditions
 - Seasonal Events Section
 - Placeholder GPS Verification System

Section H. Societal Impacts of Design

The Ramily app was developed with a focus on both its technical feasibility and its broader impacts on society. This section examines how the design addresses critical areas, including public health, safety, and welfare, as well as societal, political, economic, and ethical considerations. These impacts were integral to shaping the app's objectives, constraints, and final implementation.

H.1 Public Health, Safety, and Welfare

The Ramily app includes several design elements aimed at enhancing the safety and well-being of its users:

- **Mental Health Resource Integration:**
 - Direct links to VCU's mental health services and emergency contact options provide students with immediate access to support when needed.
- **Community Moderation:**
 - Built-in moderation tools for ensuring a safe online environment, minimizing risks of harassment or bullying.
- **Privacy Protections:**
 - The app adheres to FERPA regulations to safeguard student data, ensuring that personal information is protected against unauthorised access.

H.2 Societal Impacts

The ramily app aims to foster a sense of belonging and community among VCU students, particularly first-year and transfer students.

- **Strengthening Social Connections:**
 - By connecting students with shared interests and mentorship opportunities, the app improves social integration and reduces feelings of isolation.
- **Long-Term Engagement:**
 - Enhanced engagement with campus life could lead to increased retention rates, benefiting both students and the university.

H.3 Political/Regulatory Impacts

- **Data Privacy Compliance:**
 - The app complies with U.S. privacy laws, including FERPA, and is designed with potential global compliance in mind to support future scalability.
- **Accessibility Regulations:**
 - Adherence to ADA accessibility standards ensures the app meets legal requirements for technology used in educational institutions.

H.4. Economic Impacts

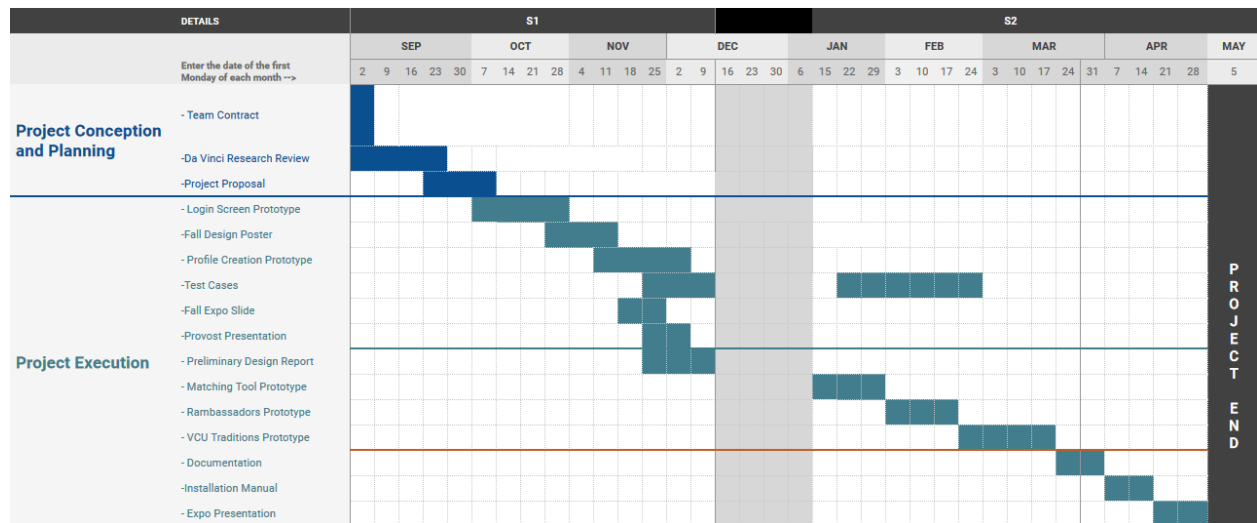

- **Student Retention Benefits:**
 - By improving student experiences and connections, the app supports VCU's retention and graduation rates, which could positively impact the university's funding and reputation.
- **Cost-Effective Development:**
 - The app was designed with scalability in mind, ensuring that maintenance and updates remain affordable for VCU while maximizing long-term value.

H.5. Ethical Considerations

- **Data Privacy and Security:**
 - Ethical handling of user data was a primary consideration, ensuring transparency and compliance with privacy standards.
- **Community Moderation:**
 - Ethical guidelines for community interactions are built into the app, creating a safe and respectful space for all users.

Appendix 1: Project Timeline

Provide a Gantt chart of similarly composed visual timeline showing the start and end dates of all completed tasks and how they are grouped together, overlapped, and linked together. Include all senior design requirements including design reports and Expo materials (i.e. Abstract, Poster, and Presentation). All major milestones should be included in the timeline.

Appendix 2: Team Contract (i.e. Team Organization)

Contents

Step 1: Get to Know Another

Step 2: Team Culture. Clarify the Group's Purpose and Culture Goals.

Step 3: Time Commitments, Meeting Structure, and Communication

Step 4: Determine Individual Roles and Responsibilities

Step 5: Agree to the above team contract

Step 1: Get to Know One Another. Gather Basic Information.

Task: This initial time together is important to form a strong team dynamic and get to know each other more as people outside of class time. Consider ways to develop positive working relationships with others, while remaining open and personal. Learn each other's strengths and discuss good/bad team experiences. This is also a good opportunity to start to better understand each other's communication and working styles.

<i>Team Member Name</i>	<i>Strengths each member bring to the group</i>	<i>Other Info</i>	<i>Contact Info</i>
DaJuan Hackett	<i>Creativity, Various coding languages experience, hard driven</i>	<i>I've completed numerous projects with Java, C, pyret, HTML, python, etc with ranging from intermediate to advanced knowledge of them.</i>	hackettdc@vcu.edu 540-940-9528 Discord:da119
Tariq Gafar	<i>being Proactive , offer new suggestions, application experience</i>	<i>I've worked on web applications using react and Node JS, and have experience with working full stack and the process behind it</i>	gafarta@vcu.edu 804-502-5185

Raleigh Norris	Planning, strategy.problem-solving,	Experience in SQL, Java, C.	norrisrp@vcu.edu 804-898-8692 Discord: sirralenburg
Ziad Kashef	Able to Work well with a team, Communication, Strategy/problem-solving, creativity, and Really enjoy learning new things.	<ul style="list-style-type: none"> • Experience with Java , JavaScript, HTML, CSS some python, and C • Experience with project management and agile methodologies in industry • As well as Industry experience within consulting helping my strategy and problem solving skills 	Kashefze@vcu.edu 703-939-2740 Discord: ziadkashef

<i>Other Stakeholders</i>	<i>Notes</i>	<i>Contact Info</i>
<i>Lukasz Kurgan</i>		<i>lkurgan@vcu.edu</i>
<i>Manjari Kumarappan</i>		<i>kumarappanma@vcu.edu</i>

Step 2: Team Culture. Clarify the Group's Purpose and Culture Goals.

Task: Discuss how each team member wants to be treated to encourage them to make valuable contributions to the group and how each team member would like to feel recognized for their efforts. Discuss how the team will foster an environment where each team member feels they are accountable for their actions and the way they contribute to the project. These are your Culture Goals (left column). How do the students demonstrate these cultural goals? These are your Actions (middle column). Finally, how do students deviate from the team's cultural goals? What are ways that other team members can notice when that culture goal is no longer being honored in team dynamics? These are your Warning Signs (right column).

Resources: More information and an example of Team Culture can be found on the Biodesign Student Guide "Intentional Teamwork" page ([webpage](#) | [PDF](#))

<i>Culture Goals</i>	<i>Actions</i>	<i>Warning Signs</i>
<i>Taking responsibility for assigned tasks.</i>	<ul style="list-style-type: none">- Meeting project deadlines- Seeking help from other group members and advisors if needed	<ul style="list-style-type: none">- Missed deadlines- Lack of communication
<i>Respect and valuing other team members' ideas and contributions</i>	<ul style="list-style-type: none">- Acknowledgment of other team members' ideas- Active listening	<ul style="list-style-type: none">- No engagement and dismissal of ideas
<i>Encouraging open collaboration</i>	<ul style="list-style-type: none">- Offering support to other members- Regularly sharing project updating	<ul style="list-style-type: none">- Frequent isolated work- Missing Meetings- Reluctant to ask for help

Step 3: Time Commitments, Meeting Structure, and Communication

Task: Discuss the anticipated time commitments for the group project. Consider the following questions (don't answer these questions in the box below):

- What are reasonable time commitments for everyone to invest in this project?
- What other activities and commitments do group members have in their lives?
- How will we communicate with each other?
- When will we meet as a team? Where will we meet? How Often?
- Who will run the meetings? Will there be an assigned team leader or scribe? Does that position rotate or will the same person take on that role for the duration of the project?

Required: How often you will meet with your faculty advisor, where you will meet, and how the meetings will be conducted. Who arranges these meetings?

See examples below.

<i>Meeting Participants</i>	<i>Frequency Dates and Times / Locations</i>	<i>Meeting Goals Responsible Party</i>
<i>Students Only</i>	<i>As Needed, SMS messaging</i>	<i>Update group on day-to-day challenges and accomplishments</i>
<i>Students Only</i>	<i>Every Monday @5:30pm via Discord</i>	<i>Actively work on project, discuss work to be done individually</i>
<i>Students + Faculty advisor</i>	<i>Every Friday at 3:30 PM online on Google Meet</i>	<i>Update faculty advisor and get answers to our questions (Create a list of questions/concerns in Tuesday meeting before)</i>

<i>Project Sponsor</i>	<i>Every Friday at 3:30 PM online on Google Meet</i>	<i>Update project sponsor and make sure we are on the right track (Create a list of questions/concerns in Tuesday meeting before)</i>
------------------------	--	---

Step 4: Determine Individual Roles and Responsibilities

Task: As part of the Capstone Team experience, each member will take on a leadership role, *in addition to* contributing to the overall weekly action items for the project. Some common leadership roles for Capstone projects are listed below. Other roles may be assigned with approval of your faculty advisor as deemed fit for the project. For the entirety of the project, you should communicate progress to your advisor specifically with regard to your role.

- **Before meeting with your team**, take some time to ask yourself: what is my “natural” role in this group (strengths)? How can I use this experience to help me grow and develop more?
- **As a group**, discuss the various tasks needed for the project and role preferences. Then assign roles in the table on the next page. Try to create a team dynamic that is fair and equitable, while promoting the strengths of each member.

Communication Leaders

Suggested: Assign a team member to be the primary contact for the client/sponsor. This person will schedule meetings, send updates, and ensure deliverables are met.

Suggested: Assign a team member to be the primary contact for faculty advisor. This person will schedule meetings, send updates, and ensure deliverables are met.

Common Leadership Roles for Capstone

1. **Project Manager:** Manages all tasks; develops overall schedule for project; writes agendas and runs meetings; reviews and monitors individual action items; creates an environment where team members are respected, take risks and feel safe expressing their ideas.
Required: On Edusourced, under the Team tab, make sure that this student is assigned the Project Manager role. This is required so that Capstone program staff can easily identify a single contact person, especially for items like Purchasing and Receiving project supplies.
2. **Logistics Manager:** coordinates all internal and external interactions; lead in establishing contact within and outside of organization, following up on communication of commitments, obtaining information for the team; documents meeting minutes; manages facility and resource usage.

3. **Financial Manager:** researches/benchmarks technical purchases and acquisitions; conducts pricing analysis and budget justifications on proposed purchases; carries out team purchase requests; monitors team budget.
4. **Systems Engineer:** analyzes Client initial design specification and leads establishment of product specifications; monitors, coordinates and manages integration of sub-systems in the prototype; develops and recommends system architecture and manages product interfaces.
5. **Test Engineer:** oversees experimental design, test plan, procedures and data analysis; acquires data acquisition equipment and any necessary software; establishes test protocols and schedules; oversees statistical analysis of results; leads presentation of experimental finding and resulting recommendations.
6. **Manufacturing Engineer:** coordinates all fabrication required to meet final prototype requirements; oversees that all engineering drawings meet the requirements of machine shop or vendor; reviews designs to ensure design for manufacturing; determines realistic timing for fabrication and quality; develops schedule for all manufacturing.

<i>Team Member</i>	<i>Role(s)</i>	<i>Responsibilities</i>
Ziad Kashef	<i>Project Manager</i>	<ul style="list-style-type: none"> ● <i>Manages all tasks</i> ● <i>Develops overall schedule for project</i> ● <i>Writes agendas and runs meetings;</i> ● <i>Reviews and monitors individual action items</i> ● <i>Creates an environment where team members are respected, take risks and feel safe expressing their ideas</i>
Raleigh Norris	Systems Engineer	<ul style="list-style-type: none"> ● Outline product specifications into workable steps ● Manage integration and debugging
Tariq Gafar	Financial Manager	<ul style="list-style-type: none"> ● researches/benchmarks technical purchases and acquisitions; ● conducts pricing analysis and budget justifications on proposed purchases; ● carries out team purchase requests; monitors team budget.

DaJuan Hackett	Test Engineer	<ul style="list-style-type: none"> • Oversee experimental design, test plans, and procedure • Acquire any needed data acquisition equipment and software
----------------	---------------	--

Step 5: Agree to the above team contract

<i>Team Member:</i>	<i>Ziad Kashef</i>	<i>Signature: Ziad Kashef</i>
<i>Team Member:</i>	<i>Tariq Gafar</i>	<i>Signature: Tariq Gafar</i>
